

## DIE PLATE DATERS

When it's important to stamp a date along with your specific message, a die plate dater is the obvious answer. The date prints in the center of the die plate area as shown on the sample impressions below. Your custom printing die can be affixed above, below or around the date. What a combination! Each impression tells what was done, by whom, when, where, or whatever you decide.

The IDEAL 5500 Series deluxe die plate dater with its thick type bands virtually eliminates the danger of bands breaking due to tension and will usually give trouble free service until the dates expire. The dates are held in perfect alignment by a close fitting slot in the die plate, and your message can be placed closer to the date than in other models of die plate daters. The enclosed case protects your fingers from contacting the date bands, and the extra large band adjustment wheels make changing your dates easy. Just press the die plate release button to move the die plate away from the date bands, and then turn the adjustment wheels.

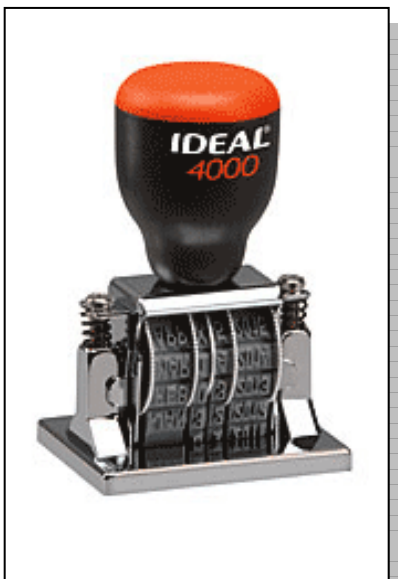

### SIZES AVAILABLE

5500 Series		4000 Series	
Number	Die Plate Size	Number	Die Plate Size
DP5500A	1 3/8" x 2 1/8"	DP4000A	1 1/8" x 2"

When cost is a factor in your choice of a die plate dater, the IDEAL 4000 Series is a good solution. Deep molded flat date bands provide clean, sharp stamp impressions. Special locking grooves on the back of the date band mechanism provide a sure positioning system for accurate band alignment. Oversized band adjustment wheels prevent your fingers from touching the date bands and make date adjustment easy.
